

## Architectural Conservation— Levels of Participation

### Considerations:

1. The scale is vast (ranging from a global perspective to the microscopic).
2. Conservation professionals usually work at different points on the scale and can often be working on several at the same time.
3. The task of preserving and presenting the built world is both synoptic and cross-disciplinary.
4. The methodology for addressing each scale of problem is essentially the same (e.g., rational, deductive reasoning).
